Forsiden præsenteret i frontenden af PlainHTML plugin:

# Mainpage

You have just installed the PlainHTML plugin for CMS3, enter the backend to start editing pages.

This is the plainHTML editor, with ajax support enabled. The cool thing is that this plugin works with javascript too... (It's just not as pretty).

Redigering af Mainpage i PlainHTML pluginet:

Ajax dialog box der kommer frem ved fejl under login:

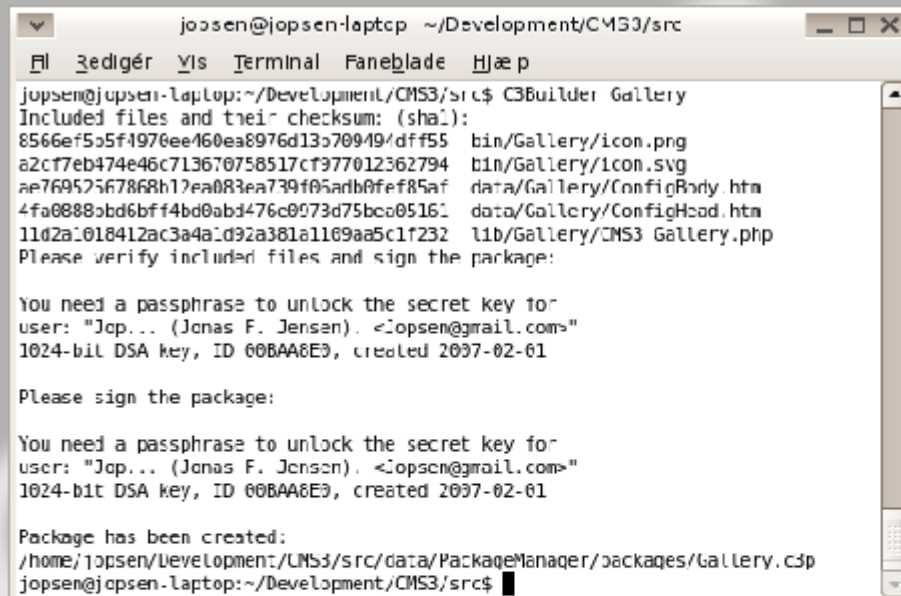

Help plugin der viser den første hjælpe side for PlainHTML pluginet:

<h2>Help</h2> <p>Select topic:</p> <ul style="list-style-type: none"><li>PlainHTML<ul style="list-style-type: none"><li>Managing pages</li><li>Create pages</li><li>Display pages</li><li>Configuration</li><li>About</li></ul></li></ul>	<h2>CMS3 / PlainHTML</h2> <p><i>A free plugin by Jonas F. Jensen.</i></p> <p>The PlainHTML plugin will let create and display plain html pages.</p> <p>Curretly there's no help text provided, since it takes an awfull long time to write... But this should prove the concept of plugin specific help pages, and sub help pages... Meaning that this text is provided using an implementation of CMS3_Help_IProvidesHelp on the CMS3_plainHTML class of the PlainHTML plugin.</p> <p>As a final thought notice that the help plugin showing this text, reads from URL, making it possible for plugins to link directly to their (sub) help pages.</p>
