

NAME

C3Builder – A utility for creating c3p packages

SYNOPSIS

C3Builder *pluginID* [**Arguments**]

DESCRIPTION

C3Builder is a utility for building and packaging CMS3 plugins as CMS3 packages (.c3p). Do that by running this utility from the working directory of your CMS3 development installation. When you execute C3Builder it will build and package a plugin depending on the pluginID you gave it. You may ask it to perform other tasks using different arguments.

OPTIONS

- help Display help message.
- clean Cleanup after building plugin, this removes all files created when the package was build.
- build-only
 Only build plugin, don't create package.
- clean-only
 Only cleanup after build, this removes all files created when the package was build.
- non-recursive
 Recursive mode requires sha1deep, from the md5deep project. In non-recursive mode files subdirectories are not included in hashlist.
- debug Show debug messages.
- quite Quite mode, do not show any messages at all, note gpg will still ask for your password.
- version
 Print version information.
